

ENGR-355  
HW#5

It is time to further consider the embedded project that was defined earlier this quarter.

- 1 a) Carefully read the description of the class project that you received (it is also posted on the class web page). Make a list of items you believe should be added to the definition to make it more complete. These could be functional items, i.e. how it functions or features, or could be more quantitative specifications.
- b) List any questions that you have about the project, its function, specifications, etc. Things you wish to know or need to know (having no questions could be a response, but I suspect there is something you still wish to know/learn).

Bring your written response to 1(a) and 1(b) above to class Monday, Feb. 7
