

# POSITION SENSING

---

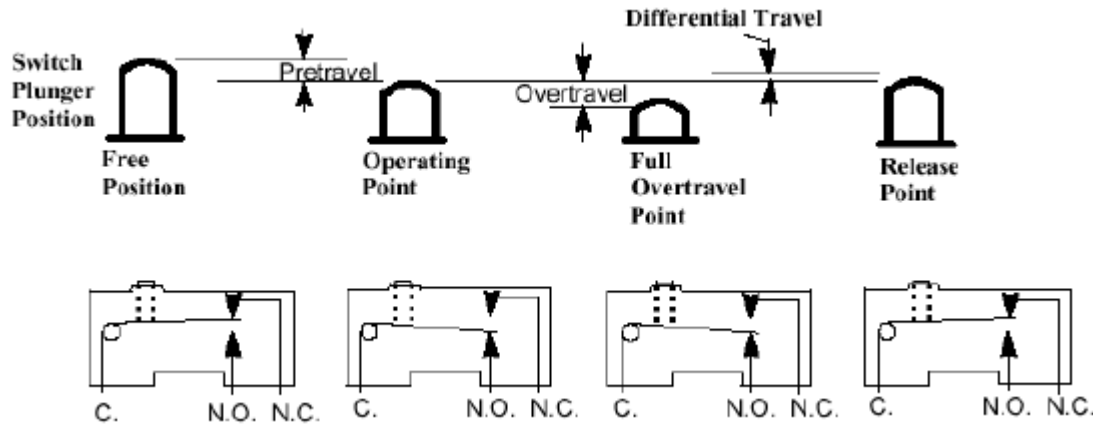

- Mechanical
- Optical
- Magnetic
- Capacitive, Ultrasonic

# MECHANICAL SENSING - MICROSWITCH

---

# MICROSWITCH OPERATION

With Rigid Actuating Device

With Resilient Actuating Device Having Spring Rate K

*Switch exhibits mechanical hysteresis.*

# MICROSWITCH ACTUATORS

Pin plunger; in-line motion

Overtravel plunger; in-line applications requiring additional overtravel

Added overtravel in a panel mount roller plunger; Actuation by cams

Leaf; Low-force, slow moving cams or slides

Roller lever; Very low force, fast moving cams

Roller leaf; Low-force, large movement actuation

Lever; Very low force, slow cams and slides

Added overtravel in a panel-mount plunger; Heavy-duty in-line applications or slow cams. Cam rise should not exceed 30°

# OPTICAL SENSING

---

- LED's and Photodiodes
- Transmissive/Reflective
- Modulated/Unmodulated
- Light-on/Dark-on
- Fiber optic

# TRANSMISSIVE & REFLECTIVE SENSORS

## Opposed Mode Alignment

Opposed Mode Alignment: Move Emitter or Receiver Up-Down, Left-Right, and Rotate

## Retroreflective Mode Alignment

Retroreflective Mode Alignment: Move Target Up-Down, Left-Right

## Proximity (Diffuse) Mode Alignment

Diffuse Mode Alignment: Rotate Up-Down, Left-Right

## Object Divergent Sensing Mode

## Fixed-field Diffuse Sensing

Object is sensed if amount of light at R1 is greater than the amount of light at R2

# BEAM PATTERN AND REFLECTANCE

**Typical Beam Pattern**

**RELATIVE REFLECTIVITY TABLE**

| <u>Material</u>               | <u>Reflectivity (%)</u> | <u>Excess Gain Required</u> |
|-------------------------------|-------------------------|-----------------------------|
| Kodak white test card         | 90%                     | 1                           |
| White paper                   | 80%                     | 1.1                         |
| Masking tape                  | 75%                     | 1.2                         |
| Beer foam                     | 70%                     | 1.3                         |
| Clear Plastic*                | 40%                     | 2.3                         |
| Rough wood pallet (clean)     | 20%                     | 4.5                         |
| Black neoprene                | 4%                      | 22.5                        |
| Natural aluminum, unfinished* | 140%                    | 0.6                         |
| Stainless steel, microfinish  | 400%                    | 0.2                         |
| Black anodized aluminum*      | 50%                     | 1.8                         |

\*NOTE: For materials with shiny or glossy surfaces, the reflectivity figure represents the maximum light return, with the sensor beam *exactly perpendicular* to the material surface

**Effective Beam**

# SPECULAR REFLECTION

---

# MODULATION

---

- “Chop” LED on and off at many kHz rate
- Bandpass filter after photodiode at the same frequency as chopping
- Threshold circuit after BPF generates on/off output

# MAGNETIC POSITION SENSORS

---

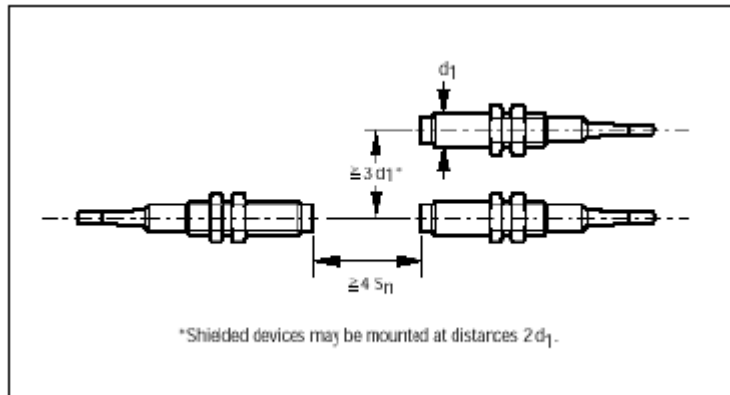

- Reed switches (*sense permanent magnet*)
- Inductive proximity sensors (*eddy current*)
- Hall Sensors (*sense permanent magnet*)

# INDUCTIVE PROXIMITY SENSOR

---

# INDUCTIVE PROXIMITY SENSORS

# HALL SENSORS

---

- Hall effect:
  - constant voltage forces a constant current in semiconductor sheet
  - magnetic field flux lines perpendicular to current cause proportional voltage across sheet.
  - discovered by E.F.Hall in 1879
- Linear sensor needs voltage regulator and amplifier
- Switch also needs threshold circuit, with hysteresis

# HALL SWITCH

- Magnet motion
  - head-on
  - bypass or slide-by
- Total effective air gap (TEAG)
- Sensitivity, Hysteresis, & Temperature

# OTHER DISCRETE POSITION SENSORS

---

- *capacitive*
- *ultrasonic*
- *variable reluctance (coil around magnet, senses moving ferrous material)*

# INCREMENTAL ENCODERS

---

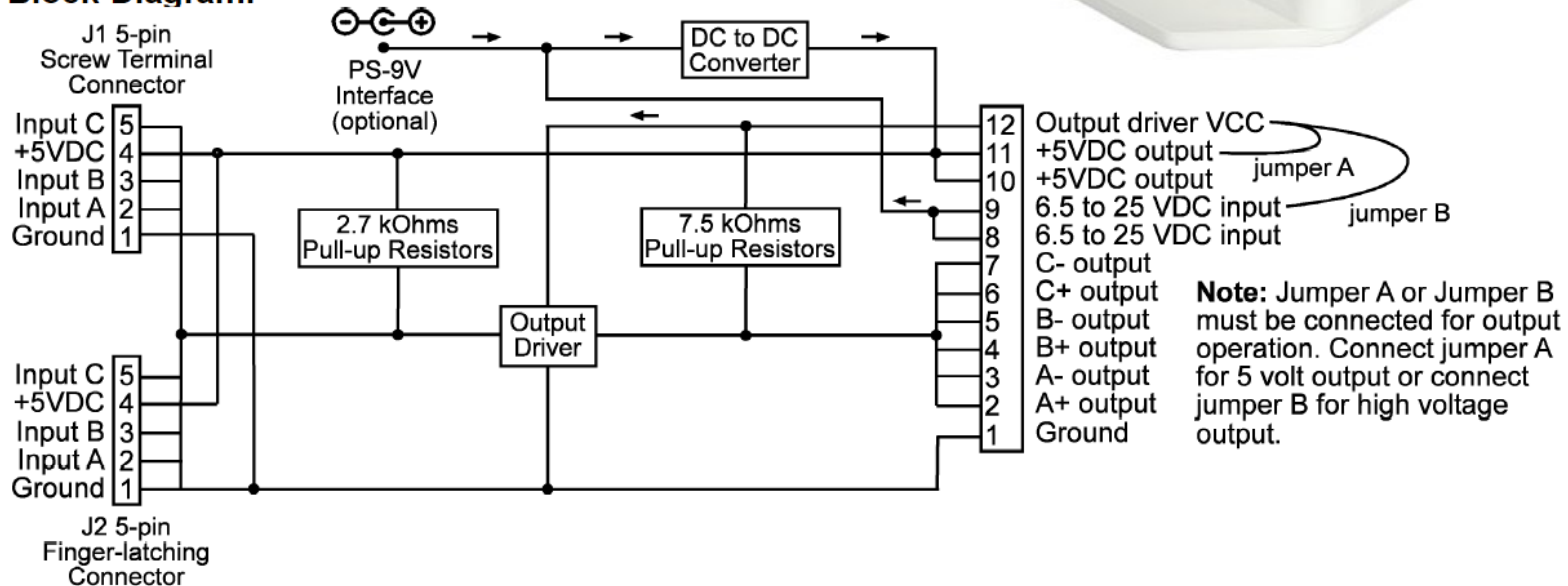

# INCREMENTAL ENCODERS

- Encoders typically run on +5V, not +24V
- Outputs are typ. not 24V compatible either

## Block Diagram:

# ABSOLUTE ENCODERS

---

- doubling resolution requires adding another photodiode/LED pair
- cost is much higher than incremental
- does not require seeking to establish reference location

# POTENTIOMETER

- A potentiometer (or pot) is a variable resistor wired to obtain a variable DC voltage proportional to position

## Mounting Types

**Bushing mount :** Most commonly used. Mounts easily in the panel hole and secures with a mounting nut.

**Servo mount :** Recommended when the shaft is to be attached to a gear or other mechanism. Allows the operator to index to zero adjustment by turning the potentiometer.

# MAGNETOSTRICTIVE POS. SENSOR

---

# MAGNETOSTRICTIVE SENSOR

# FORCE SENSING

---

- Strain gage
- Piezoelectric

# STRAIN GAGES AND LOAD CELLS

---

$$V_r = V_{out}/V_{in}(\text{strained}) - V_{out}/V_{in}(\text{unstrained})$$

GF = gage factor

$$\epsilon = \frac{-V_r}{GF}$$

# LOAD CELLS

---
